Zone App ISN | Manage Groups – View Group January 04, 2013 - Version 1.0 Problems Scenarios 1.2 Home Screen – Idea A 1.3 Group View Screen 1.1 Home Screen Group Identification and Selection A User could conceivably have many Groups. We need to make it fast, simple, and intuitive for a User to be able to Ben Affleck a) identify a Group, and b) select it (so it can be displayed). Tapping the Title Bar displays a "drop– down", scrollable list, of all the Groups you Tapping on the Title Bar when the drop-down list is displayed will close the list. Now following naming convention from the Activity Grid, so "Manage Groups – View Group" is a Task/Activity on the Activity Grid (AG). have created, ordered alphabetically, in A-Z We'll Succeed When Small triangle icon is intended to act as Christina Aguilera hint to the User that when the Title Bar is Finding/identifying a Group and then selecting it so it is tapped, something will be displayed below the Title Bar... displayed, is fast, simple, and intuitive for Users. Muhammad Ali Isaac Asimov Project X David Beckham Tapping on an entry will display that Group Work and close the drop-down list. The "Group List" Idea The sole method of Group selection is via a drop-down list, which is displayed at the top of the Home screen and Group View screen. This UI control is already used in the Google+ This idea is borrowed from the Google+ iOS app. "All Contacts" (or whatever we decide to call it) is always displayed at the top of the list and then it seems to make sense to sort the Groups in A-Z name order. app — where I got the inspiration from to use this same UI control for Group selection. A small triangle icon underneath the Title Bar is a UI affordance intended to hint to the user that something will "drop-down" below the Title Bar if it is tapped. In Google's + app (and in the mockup above, which approximates the same font sizes etc) this control provides room for "All Contacts" and 6 other User-defined Groups. Favourites Groups However, the list is scrollable, so the User only need flick the list up to scroll down and view any other Groups which Idea The Group List is sorted in A-Z order, which means that if are not currently displayed. you have a couple of Groups which you use most frequently AND they are at opposite ends of the list, switching ? If there are two (or more) groups that you often switch between but which are at opposite ends of the list, this between these Groups is more difficult than it could be because you will have to do some scrolling of the Group would force you to get your fingers scrolling, making you do a bit more work to switch between them. We could improve List (how much scrolling depends on the number of Groups that experience for our Users by letting them make a Group a Favorite and then always display the Favorites first, the User has created, plus screen size, etc). The concept of "Favourite Groups" displays any Groups which are marked directly underneath "All Contacts" – what do you think? as Favourite at the top of the Group List, directly under the (See Idea B below) permanent "All Contacts" entry. This would either entirely eliminate the need to scroll or significantly reduce it, depending on a) the number of Groups you marked as Favourite, and b) the height of you screen (iPhone 5 provides more vertical height and therefore more Groups can be display on-screen before you have to scroll to see Family 🖈 By making the Groups "Family" and "Work"
