

Delete button in very close proximity to the Done (Save) button making it more likely that a User might tap the Delete button when actually trying to save a Group.

Addition button in the main Title Bar reduces space available to display the Group Name (which could result in the app making the Group Name text smaller so it can fit on screen)

Work

The context seems to make good sense, i.e. having the Group Delete button displayed in the Group List.

Somewhat quicker than having to put a Group into Edit mode and then (potentially) having to scroll to the end of a list of Contacts before being able to hit the "Delete Group" button.

The Group Selection list also kind of becomes a Group Management list, which also makes it quicker and easier to delete multiple Groups in one swoop.

Might people be worried that deleting a Group will also delete all the Contacts in it? This concern is valid for all the Ideas in this ISN, I think. In the confirmation dialog (Contact

Delete buttons not always visible – though you can also say the same about Ideas A and B above, and perhaps this is

Sheet / Message Box etc) we can explain that this isn't the case, but is there a way to make this clearer or more

obvious from the get go, so that Users don't experience that "friction" / moment of uncertainty BEFORE they tap the Delete button?

actually a good thing — they're only displayed where they/re needed — with the list of groups...

I think the problem for me is not so much where these buttons are displayed, but WHEN they're displayed. It feels awkward/clumsy/inappropriate to display them ALL the time in the Group List. Then again, if they're visually quite subtle, perhaps they don't cause an insufferable amount of clutter.

they may well not be aware of...
